B 2007	40" x 2000 yds (1 m x 1228 m)	bale	1	

## EASY TO INSTALL INSTRUCTIONS

### Protecting Individual Trees or Shrubs

1. Tie the leading end of the burlap to the trunk below the lowest branch.
2. Proceed to wrap the tree or shrub in an upward spiral direction allowing an overlap of minimum 6" to 12" of fabric so that the limbs are protected completely.
3. Then using Select Sisal Twine overwrap the burlap sufficiently to secure it in place.

### Protecting Hedge Rows

1. Place wooden supports (ex. 2" x 2" wooden stakes ) every 3' over the full length of the hedge. Ensure that the stakes are in the ground minimum 18" and extend up to the top of the area that you desire protection.
2. Staple the leading edge of the fabric to the first stake and staple every 6" up to the full height of the fabric. Pull the fabric securely to the next stake and repeat stapling procedure. Continue until the barrier is complete.
